Maximum Marks	4 Marks

Topic: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

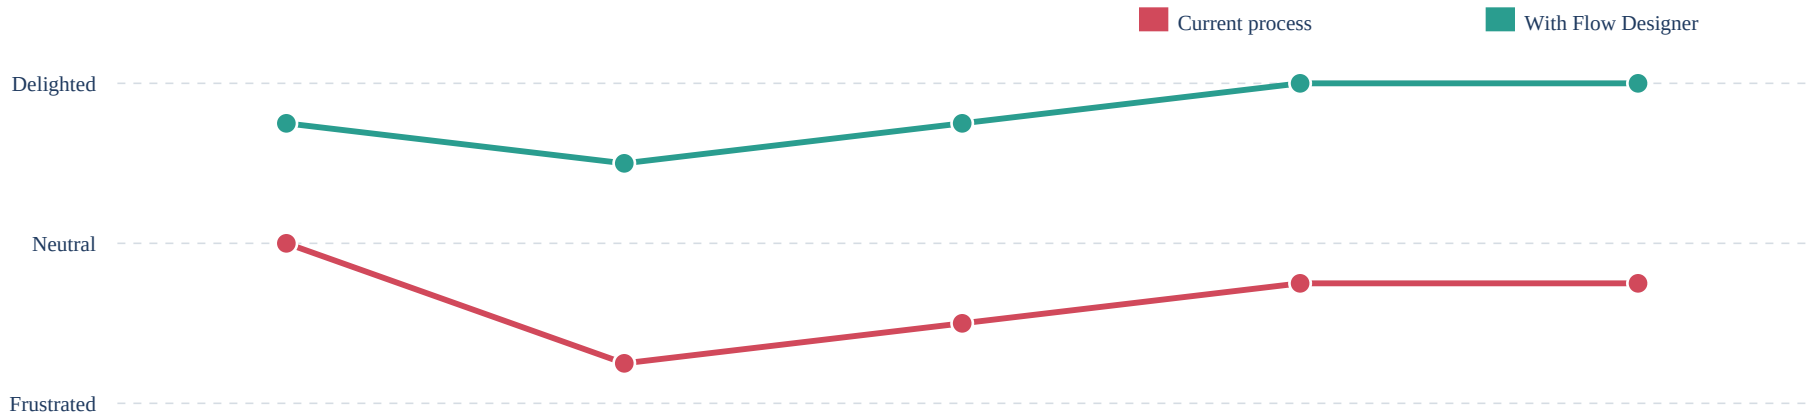

A customer journey map follows a person through every step of a process, showing what they do, which tools they touch, what they think and how they feel. Here it traces a standard laptop order from request to follow-up, so the team can see where the current process hurts and where Flow Designer automation should be applied.

Primary persona: Riya, a new employee who needs a standard laptop before her first day. **Supporting persona:** Arjun, the IT procurement coordinator who fulfils the order behind the scenes.

Part 1: Current Journey (As-Is)

	1. Request	2. Approval	3. Stock check & procurement	4. Delivery & setup	5. Follow-up & reporting
Customer actions	• Finds the laptop request form • Fills in role, location and department by hand • Submits and waits	• Emails manager to ask for approval • Follows up when there is no reply • Manager checks budget details separately	• Coordinator checks inventory manually • Raises a purchase order if stock is low • Picks a vendor by hand	• Laptop is shipped or collected • Asset record is created and assigned by hand • Employee signs in and starts work	• Employee asks for status updates • IT answers repeated queries • Managers pull turnaround data manually
Touchpoints	• ServiceNow portal • Email to IT	• Email • Chat messages • Manager inbox	• Asset inventory • Purchasing system • Vendor contacts	• Courier / IT desk • Asset records • Employee onboarding	• Email • Spreadsheets • Status calls
Thoughts	• "Why must I enter details IT already has?"	• "Is my request stuck or just slow?"	• "Do we have this model in stock?"	• "I hope it arrives before my first day."	• "I wish I could simply see the status."

Emotional Experience Across the Journey

Part 2: Pain Points and Future Journey (To-Be)

	1. Request	2. Approval	3. Stock check & procurement	4. Delivery & setup	5. Follow-up & reporting
Pain points	• Same details typed again • No guidance on the right model	• Approvals wait on people • No view of budget • Repeated reminders	• Stock checked by hand • Purchase order and vendor chosen manually	• Asset record created late or wrongly • Status unknown during shipping	• Frequent status questions • Reports built by hand
Opportunities (Flow Designer)	• Single catalog item with pre-filled specs • Auto-fill from user record; eligibility and duplicate checks	• Skip approval for pre-approved roles • One-click approval; auto-escalate after 2 days; budget check	• Auto inventory check and reservation • Auto purchase order; vendor by region or price	• Auto-created asset record on delivery • Notifications at every stage	• Portal status tracker • Dashboard of turnaround and savings

Key takeaway: The lowest point of the journey is the approval stage, where Riya has no visibility and Arjun spends his time chasing. Automating approvals, stock checks, purchase orders and status updates with Flow Designer turns a stressful, manual journey into one that is fast, visible and confident from the first request to the final report.
