Project Design Phase
Proposed Solution Template

Date	2 October 2026
Team ID	
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Proposed Solution Template:

The project team should complete the details below in the proposed solution template. It outlines the problem being addressed, the thinking behind the solution, what sets it apart, the benefits for users, how it adds value, and how it can expand.
Project: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer.

S.No.	Parameter	Description
1	**Problem Statement (Problem to be solved)**	Getting a standard laptop today involves too many manual steps. Requesters wait for email approvals without knowing where their request stands, managers have to follow up on incomplete information, and the IT team retypes details, verifies inventory by hand and raises purchase orders one at a time. New joiners are left waiting, and skilled IT staff lose hours to routine tasks.
2	**Idea / Solution Description**	Use ServiceNow Flow Designer to automate the whole standard laptop order. The employee raises a single catalog request in which known details are already filled in. The flow verifies eligibility, then either approves instantly for pre-approved roles or sends the manager a simple one-click approval. It then checks inventory, raises a purchase order only when stock is short, creates and assigns the asset record, and keeps the employee informed at each step.
3	**Novelty / Uniqueness**	Instead of disconnected manual tasks, this approach ties the request, approval, stock check, purchasing and asset tracking together in one low-code workflow. Business rules such as pre-approved roles, budget limits, automatic escalation and vendor selection based on region or price are managed through configuration, so no custom scripting is required when policies change.
4	**Social Impact / Customer Satisfaction**	Employees receive their laptops sooner and can follow the progress of their request, which lets new hires be productive from their first day. Managers save time on routine approvals, and IT staff are freed from repetitive data entry to focus on exceptions and user support. The result is a better experience for requesters, approvers and fulfilment teams alike.
5	**Business Model (Revenue Model)**	This is an internal productivity initiative and does not generate direct revenue. Its returns come from faster fulfilment, reduced manual effort, fewer mistakes and smarter use of the procurement budget. Because it is built on the ServiceNow platform the organization already owns, no additional software purchase is needed.
6	**Scalability of the Solution**	The workflow can absorb higher request volumes and extend to new laptop models, roles, locations and vendors by adjusting catalog variables, decision rules and subflows. The same design can be reused for other standard equipment such as monitors, mobile phones and peripherals.
