Functional & Performance Testing Template
Model Performance Test

Date	2 October 2026
Team ID	
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Request form validation (e.g., required fields, eligibility)	Submit the laptop request with valid details, then with a missing cost center and as an ineligible user	Valid requests are accepted; errors are shown for invalid or missing details	Valid request accepted; missing cost center and ineligible user were blocked with clear messages	**Pass**
FT-02	Number and duplicate validation (e.g., quantity, refresh cycle)	Request quantity 1, then a quantity above the limit, then a second request within the refresh cycle	Quantity 1 is accepted; out-of-range quantity and duplicate requests show an error	Quantity 1 accepted; quantity above limit and duplicate request were rejected with errors	**Pass**
FT-03	Approval and fulfilment flow (e.g., auto-approval, stock check, purchase order)	Submit complete requests from a pre-approved role and from a role needing approval, with stock available and out of stock	Pre-approved roles are approved automatically; others go to the manager; a laptop is reserved or a purchase order is created	Flow followed the expected route in all four combinations; asset record created on delivery	**Pass**
FT-04	Integration check (vendor connection and email)	Send a test purchase order to the vendor endpoint and trigger a stage notification email	Vendor responds successfully and the email is delivered	Vendor endpoint returned success and the notification email was delivered	**Pass**
PT-01	Flow execution time test	Use the Flow Execution Details timestamps for an auto-approved request, from submission to fulfilment step	Should complete in under 5 seconds	Average of 4.2 seconds across 50 requests	**Pass**
PT-02	Concurrent request test	Submit 50 requests at the same time	Flow should not slow down noticeably or fail	50 requests processed; 98% completed with no noticeable slowdown	**Pass**
PT-03	Bulk request load test (e.g., 100 new-hire laptops)	Import and submit 100 requests together and monitor processing	Should work smoothly without crashing	97 of 100 completed; 3 were retried by the error flow; no crash	**Pass**

Note: the actual results above are sample results for illustration. Replace them with the outcomes from your own test runs before you submit.

Implementation Screenshots (ServiceNow)

Captured from the project demo video (Flow Designer build and a test laptop request).
