Project Development Phase
Model Performance Test

Date	2 October 2026
Team ID	
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Model Performance Testing:

Project team shall fill the following information in the model performance testing template. This project is a Flow Designer automation rather than a trained model, so the metrics measure how correctly and quickly the standard laptop order flow runs.

S.No.	Parameter	Values	Screenshot
1	**Metrics**	**Flow Performance:** Success rate - 98% (49 of 50 test requests completed all steps) Failed runs - 1, routed to the coordinator by the error flow Average execution time - 4.2 seconds per request **Approval Routing:** Correct routing - 50 of 50 requests (pre-approved roles auto-approved, others sent to the manager) Stock decisions - 50 of 50 correct (reserved vs purchase order)	
2	**Tune the Model**	**Performance Tuning -** Replaced repeated record lookups with a single lookup in a subflow and moved notifications to run in the background. Average execution time dropped from 6.1 to 4.2 seconds. **Validation Method -** 8 test cases (one per role, stock and approval scenario) run in a test instance and compared with expected results, followed by load tests with 10, 50 and 100 requests.	

Note: the values above are sample results for illustration. Replace them with the measurements from your own test runs, and add screenshots of the flow execution details as evidence.

Implementation Screenshots (ServiceNow)

Captured from the project demo video (Flow Designer build and a test laptop request).
