Project Development Phase
Model Performance Test

Date	2 October 2026
Team ID	
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Model Performance Testing:

Project team shall fill the following information in the model performance testing template. This project reports on its results with ServiceNow reports and dashboards (instead of Power BI), so the rows below describe the data, filters, calculations and visuals used for the turnaround and savings reporting.

S.No.	Parameter	Screenshot / Values
1	**Data Rendered**	Request, asset and purchase order tables (3 tables, about 250 sample records) feed the reports. 
2	**Data Preprocessing**	Test and cancelled requests removed, blank cost centers flagged, and request, approval and delivery dates converted to date-time fields. Add screenshot
3	**Utilization of Data Filters**	4 filters: request status, department, location and date range. 
4	**Calculations / Queries Used (in place of DAX)**	3 calculations: turnaround time (delivery date minus request date), auto-approval rate (auto-approved requests divided by total requests), and cost saving (manual hours saved multiplied by hourly cost). Add screenshot
5	**Dashboard design**	No of Visualizations / Graphs - 4 (requests by status, average turnaround time, automated vs manual requests, cost savings). Add screenshot
6	**Report Design**	No of Visualizations / Graphs - 3 (monthly request volume, vendor delivery time, stock level by laptop model). Add screenshot

Note: the values above are sample values for illustration. Replace them with the details of your own reports and add screenshots of the dashboard and reports.

Implementation Screenshots (ServiceNow)

Captured from the project demo video (Flow Designer build and a test laptop request).
