Project Development Phase
Model Performance Test

Date	2 October 2026
Team ID	
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Model Performance Testing:

Project team shall fill the following information in the model performance testing template. This project is a Flow Designer automation rather than a trained model, so accuracy here means the share of test requests that produced the expected outcome from the flow.

S.No.	Parameter	Values	Screenshot
1	**Model Summary**	**Solution:** Standard laptop order automation built in ServiceNow Flow Designer, using tables, fields and reports to manage request data 1 catalog item (Standard Laptop) triggers 1 main flow with 3 subflows (approval, stock check and purchase order, asset record and notification) **Note:** A request is created only when the submitted data matches the validation rules (eligibility, required fields, cost center). Otherwise an error message is shown.	
2	**Accuracy**	**Training Accuracy -** 92% (23 of 25 development test requests produced the expected outcome) **Validation Accuracy -** 96% (48 of 50 separate test requests produced the expected outcome)	
3	**Confidence Score (Only YOLO Projects)**	Not applicable. This row is only for YOLO (object detection) projects, and this solution does not use object detection.	Add screenshot

Note: the values above are sample results for illustration. Replace them with the measurements from your own test runs, and add screenshots of the flow execution details as evidence.

Implementation Screenshots (ServiceNow)

Captured from the project demo video (Flow Designer build and a test laptop request).
